**Comment**

The Thyroid Stimulating Hormone (TSH) test is a blood test used to evaluate the function of the thyroid gland. TSH is produced by the pituitary gland and helps regulate the production of thyroid hormones (T3 and T4). This test is commonly used to diagnose thyroid disorders such as hypothyroidism and hyperthyroidism. High TSH levels usually indicate an underactive thyroid, while low TSH levels may suggest an overactive thyroid. The normal TSH range in adults is approximately 0.4 – 4.0 mIU/L, though it may vary slightly by laboratory.
