### SEROLOGY

#### Blood Group (ABO)

Blood Group (ABO)

A

Rh Typing

POSITIVE (+ve)

POSITIVE

#### Comment

Blood Group (ABO) is a laboratory test used to determine a person's blood type based on the presence or absence of A and B antigens on red blood cells. The four main blood groups are A, B, AB, and O. ABO blood typing is essential for safe blood transfusions, organ transplantation, and prenatal care, as receiving incompatible blood can cause serious health complications.
