BIOCHEMISTRY

C-Reactive Protein (CRP Quantitative)

CRP (Quantitative)	▲	28	mg/L	00 - 6.0
--------------------	---	----	------	----------

Comment

C-Reactive Protein (CRP) is a protein produced by the liver in response to inflammation in the body. The level of CRP in the blood increases when there is an infection, injury, or inflammatory condition. A CRP test helps doctors detect and monitor inflammation associated with diseases such as arthritis, bacterial infections, and heart disease. Higher CRP levels generally indicate greater inflammation, but the test does not identify the exact cause.
