Comment

The Liver Function Test (LFT) is a group of blood tests used to assess the health and functioning of the liver. It measures different enzymes, proteins, and substances such as SGOT (AST), SGPT (ALT), ALP, bilirubin, albumin, and total protein. These tests help in diagnosing liver diseases like hepatitis, fatty liver, jaundice, liver infection, and liver damage caused by alcohol or medicines. Abnormal LFT values may indicate inflammation, blockage of bile ducts, or impaired liver function. LFT is also used to monitor the progress of liver disease and response to treatment.

Comment

The Kidney Function Test (KFT) is a group of blood and urine tests used to evaluate how well the kidneys are working. It commonly includes tests such as serum creatinine, blood urea, uric acid, electrolytes, and eGFR. KFT helps in diagnosing kidney diseases, kidney infections, dehydration, and monitoring patients with diabetes or high blood pressure. Increased levels of urea and creatinine may indicate impaired kidney function. This test is important for assessing kidney health and monitoring the effectiveness of treatment.

TSH (Thyroid Stimulating Hormone)

TSH	▲	8.185	uIU/mL	0.40 - 4.20
-----	---	-------	--------	-------------

Comment

The Thyroid Stimulating Hormone (TSH) test is a blood test used to evaluate the function of the thyroid gland. TSH is produced by the pituitary gland and helps regulate the production of thyroid hormones (T3 and T4). This test is commonly used to diagnose thyroid disorders such as hypothyroidism and hyperthyroidism. High TSH levels usually indicate an underactive thyroid, while low TSH levels may suggest an overactive thyroid. The normal TSH range in adults is approximately 0.4 – 4.0 mIU/L, though it may vary slightly by laboratory.
