SERUM CREATININE		1.3	mg/dl	0.6-1.40

Comment

Serum Creatinine is a blood test that measures the level of creatinine, a waste product produced by normal muscle metabolism. The kidneys filter creatinine from the blood and remove it through urine, so this test is commonly used to assess kidney function. Elevated creatinine levels may indicate impaired kidney function or kidney disease, while normal levels generally suggest that the kidneys are working properly. Serum creatinine is often used along with other tests to monitor kidney health and guide medical treatment.
