Test	Flag	Result	Unit	Normal Range
ESR				
WESTERGRENN METHOD				
ERYTHROCYTE SEDIMENTATION RATE		18		05-20

Comment

Erythrocyte Sedimentation Rate (ESR) is a simple blood test that measures how quickly red blood cells settle at the bottom of a test tube over one hour. A higher-than-normal ESR may indicate inflammation, infection, autoimmune disorders, or other medical conditions in the body. While ESR does not diagnose a specific disease, it is commonly used to detect and monitor inflammatory processes and assess the response to treatment.

BIOCHEMISTRY

BLOOD SUGAR RANDOM (BSR)	89	mg/dl	70-150
--------------------------	----	-------	--------

Comment

A Random Blood Sugar (RBS) test measures the amount of glucose (sugar) in the blood at any time of the day, regardless of when a person last ate. It is used to help detect and monitor diabetes and evaluate how well the body controls blood sugar levels. High or low blood sugar levels may indicate a health problem that needs medical attention.

WIDAL TEST NEW

TYPHI "O"	1/160
TYPHI "H"	1/40
TYPHI "AH"	1/20
TYPHI "BH"	1/20
Result	Positive

Comment

Widal test is a serological test used to detect antibodies against Salmonella Typhi and Salmonella Paratyphi, the bacteria responsible for enteric fever (typhoid fever). The test measures agglutinating antibodies against O (somatic) and H (flagellar) antigens in the patient's serum. Results should be interpreted along with clinical findings and local baseline antibody titers, as prior vaccination or previous infection may influence the results.
