### BIOCHEMISTRY

#### WIDAL TEST NEW

TYPHI "O"		<b>1/160</b>		
TYPHI "H"		1/20		
TYPHI "AH"		1/20		
TYPHI "BH"		1/20		
Result		<b>Positive</b>		

#### Comment

Widal test is a serological test used to detect antibodies against Salmonella Typhi and Salmonella Paratyphi, the bacteria responsible for enteric fever (typhoid fever). The test measures agglutinating antibodies against O (somatic) and H (flagellar) antigens in the patient's serum. Results should be interpreted along with clinical findings and local baseline antibody titers, as prior vaccination or previous infection may influence the results.

### SEROLOGY

HIV I & II(SCREENING)	Non-Reactive
-----------------------	--------------

#### Comment

HIV I & II screening is a blood test used to detect infection with Human Immunodeficiency Virus (HIV) Type 1 and Type 2. It is commonly performed as an initial screening test to identify antibodies and/or antigens related to HIV infection. A non-reactive (negative) result usually indicates that no evidence of HIV was found, while a reactive (positive) result requires additional confirmatory testing. Early HIV screening is important because it helps with timely diagnosis, treatment, and prevention of transmission.
