BIOCHEMISTRY				
BLOOD SUGAR RANDOM (BSR)		75	mg/dl	70-150
Comment A Random Blood Sugar (RBS) test measures the amount of glucose (sugar) in the blood at any time of the day, regardless of when a person last ate. It is used to help detect and monitor diabetes and evaluate how well the body controls blood sugar levels. High or low blood sugar levels may indicate a health problem that needs medical attention.				
SERUM CREATININE		1.1	mg/dl	0.7-1.40
Comment Serum Creatinine is a blood test that measures the level of creatinine, a waste product produced by normal muscle metabolism. The kidneys filter creatinine from the blood and remove it through urine, so this test is commonly used to assess kidney function. Elevated creatinine levels may indicate impaired kidney function or kidney disease, while normal levels generally suggest that the kidneys are working properly. Serum creatinine is often used along with other tests to monitor kidney health and guide medical treatment.				
BLOOD UREA		34.9	mg/dl	11-45
